

**Why settle for anything but genuine Resene colour?**

**GENUINE  
Resene  
COLOUR**

Specifying your favourite Resene colour on furniture, shelving and kitchens can be a nightmare with the material supplier's 'colour match' not matching the original, throwing out the balance in the carefully selected colour scheme.

Now keeping the scheme consistent is easy with **Resene ArmourCat**, a range of acid-catalysed pigmented, metallic and clear finishes designed for everything from desks, shelves and shop fittings to kitchen units, timber fixtures and furniture.

The Resene ArmourCat range is not only flexible with excellent coverage and durability, but is available in an extensive selection of **Resene Total Colour System** hues, **Resene Metallics** finishes and gloss and satin clears. That means perfect matches to the Resene colours you know and love. The clears can be used in isolation to bring out the grain in timber or as a finish coat over metallics for maximum effect.

Get piece of mind with Resene ArmourCat that the colour you specify on cabinetry, furniture and the like, is the colour you get. Data sheets are available from Resene ColorShops nationwide or you can view them online at [www.resene.co.nz/archspec/datashts.htm](http://www.resene.co.nz/archspec/datashts.htm).

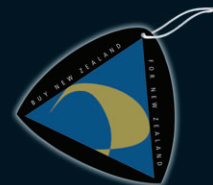

Contact either a Resene architectural representative for assistance with your specification or contact a Resene Automotive and Performance Coatings representative for technical service and applicator assistance. Product samples are available on request.
